VEICHI

AC300 Series Frequency Inverter

AC300 Series High Performance Inverter

Sense & Simplicity

Inherit the superior platform technology
Industrial leading vector control technology
Compatible with AM/PMSM

Simplify

Simple wiring, euro terminal, can save the wiring time and cost
Adopt the domestic general parameters group, optimize the keyboard buttons, easy to use
Simple debugging, specialized host software VCACSoft Ver1.3, can reduce the debugging time and difficulty to the maximum

Thinner, integration of design and aesthetics

The "book-body machine" of inverter
Book narrow-body design, can reduce 60% size at most
Straight deduct of heat dissipation, parallel installation of multi-inverters, can greatly reduce the size of electric cabinet

VEICHI Electric Co., Ltd. is a high-tech enterprise that is professionally engaged in the development, manufacturing and marketing of industrial automatic control products, and we are committed to becoming a global leading provider of industrial automatic control products and system solutions.

VEICHI is a competitive company and adopts the dual-base operating mode, which contains the Shenzhen VEICHI and Suzhou VEICHI. Suzhou VEICHI Electric Co., LTD is located in Suzhou Wuzhong Economic and Technological Development Zone, which covers 50 acres. The total construction area is approximately 80 thousand square meters and all properties are privately run. Additionally, VEICHI is always at the forefront of the domestic industrial automation field.

VEICHI has become the flagship company of industrial automation, which owns an innovative R&D team and establishes a good corporation relationship with famous universities and research institutions. Currently, VEICHI owns more than 110 patents of invention, and many of them are in the leading position both at home and abroad, which completely has independent intellectual property rights.

VEICHI produces a variety of core products, including Variable Frequency Drive (VFD), Servo Drive System, Photovoltaic Inverter, PLC, HMI, and Automation Equipment, which are widely used in industries such as oil & gas, chemical, ceramic, crane & construction hoist,lathe, Auto making, metallurgy, electrical cable and wire, plastic, print and package, textile, chemical fiber,metal work and , coalmining and municipal engineering. Suitable solutions and products are always ready to meet the demands and improve comprehensive competitiveness of customers.

"Innovation is the lifeblood of VEICHI", therefore we're committed to becoming one of the leading providers of electric drives, industrial control and green energy products. VEICHI has set up more than 40 brand offices in China and dozens of partners in Asia, Europe and Africa.

VEICHI has been named Chinese Electrical Industry's Top Ten National Brands, Chinese Electrical Industry Top Ten Satisfying Brands and Top Ten National Brands of Inverter Industry. VEICHI products have become the first choice of many enterprises.

AC300 Series High Performance Inverter

Ac300 series inverter is the product developed on the platform of VEICHI latest high-performance vector technology. It not only adopts the internationally leading filed-orientation vector control technology, which is compatible with AM and PMSM control, but also makes the most reasonable layout of components under the premise of high-performance and high-reliability, so as to achieve the book narrow-body design. Besides, to strengthen the usability and industrial specialization, it is equipped with rich extension interfaces and new extension accessories, realizing the features of high performance, high reliability, high power density and high usability.

▶ Product Features

Features Overview

- High-performance vector general platform, new motor control algorithm.
- Compatible with AM and PMSM, Open loop and Closed-loop.
- Accurate decoupling of torque excitation , excellent performance of dynamic response.
- Full range of book-body design, can save the installation space to the maximum.
- Comprehensive thermal simulation design, can guarantee the rationality of hardware layout.
- New design of air duct and full range of DC fan cooling, safe and reliable.
- Creative grounding method of AC300 series, can quickly solve the EMI problem.
- Modular design of software and hardware, powerful extension capability.
- Rich extension interfaces and extension accessories, can cover all kinds of applications.
- Optimized keyboard design, and support external keyboard.
- Much easier and more convenient debugging on-site, can support the firmware upgrading on-site.
- Tri-proof design of whole machine and tri-proof painting of PCB, can ensure the stability and reliability of products.

General specification

Power range	single-phase 220V 50/60Hz	0.75-220KW
	three-phase 220V 50/60Hz	0.75-220KW
	three-phase 380V 50/60Hz	0.75-710KW
Input	Allowable voltage fluctuation	Voltage:320V~440V Voltage unbalance rate:<3%
	Allowable frequency fluctuation	Frequency:±5%
Output	Distortion rate	IEC61800-2
	Output voltage	0 ~ input voltage，error with 5%
	Output frequency range	0-600Hz
	Overload capacity	150% rated current 1min 180% rated current 10s 200% rated current 0.5s

Performance Features

Support various types of motor / load

AC300 series inverter could drive normal AM, variable frequency motor, AC servo motor, PM, high-speed motor and motorized spindle.

AM   Spindle motor   PMSM
Control modes selection

Control mode	Speed control	Torque control	Position control	Matched motor
VF mode	√	×	×	AM
Voltage frequency separation	√	×	×	Torque motor, EPS power
High-performance VC control without PG	√	√	×	AM, PMSM
High-performance VC control with PG	√	√	√	AM, PMSM

Excellent control performance

| Control mode	Speed regulation range	Start-up torque	Matched motor
High-performance VC control without PG	1:100	150%	PMSM
High-performance VC control without PG	1:100	150%	AM
High-performance VC control with PG	1:1000	200%	AM, PMSM

Closed-loop torque response <10ms, steady speed accuracy 0.02%, speed pulsation 0.2%.
Open-loop torque response <20ms, steady speed accuracy 0.2% (PMSM), 0.5% (AM).
The maximum output frequency is 600 Hz under VC control, and the minimum carrier frequency is 1kHz.

High start-up torque characteristic

High torque at lower frequency. It can output 200% rated torque at 0.0Hz under closed-loop VC mode, and can run smoothly with load at ultra-low speed 0.01Hz. Powerful lower torque output, can effectively ensure a stable and smooth start.
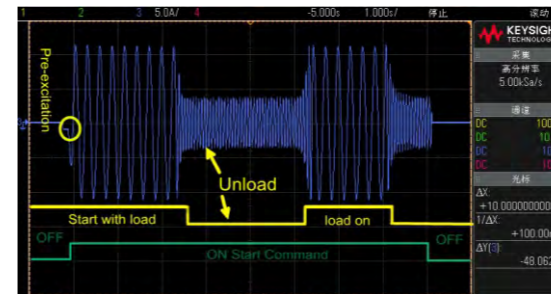

Stable torque output under torque control mode. The torque linearity bias is within 3%, which greatly guarantees the stable operation of devices.
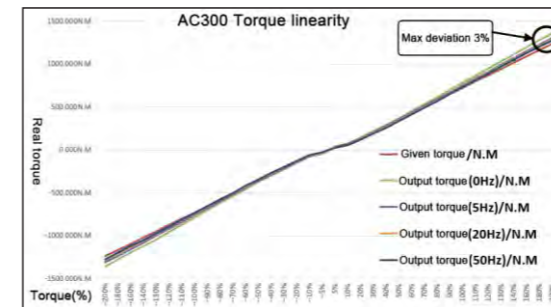

### Over-excitation braking function

Without using braking resistance, it can realize fast braking with over-excitation braking function in some occasions of inertia stop, so as to improve the usability of products. The over-excitation function could effectively suppress the rising of bus voltage in the process of deceleration to avoid the overvoltage fault, and at the same time, it could realize fast braking to meet the fast stop while power off.
Disable over excitation   Enable over excitation

Stable high-speed weak-magnetic control

The new weak-magnetic control algorithm and high-bandwidth current VC control algorithm realize the steady high-speed weak-magnetic operation, and could support maximum 12 times of weak-magnetic high-precision output

The current waveform under 12 times of weak-magnetic
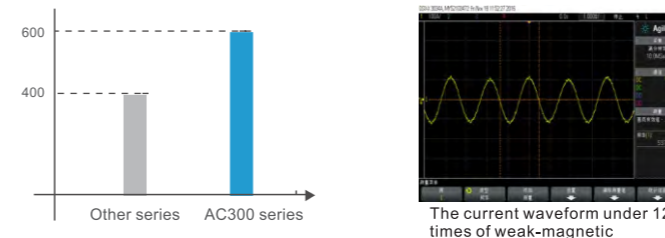

■ Other series: The maximum output frequency could reach 320/100Hz under VC control;
■ AC300 series: The maximum output frequency could reach 600Hz under VC control;

### Self-tuning of motor parameters

It could accurately acquire the motor parameters both in rotary and static self-tuning, so as to provide higher control accuracy and response speed, which is convenient and simple.
Rotary self-tuning: Must unload the motor. Suit for applications with higher requirement of control accuracy.
Fully static self-tuning: Leading motor tuning algorithm, can acquire the motor parameters in static status, which is comparable to the rotary self-tuning.
Rotary self-tuning
Fully static self-tuning

Software suppression function

Over current suppression

The current suppression function could avoid the frequent OC fault of inverter. While the current is over the current protection point, it could continuously limit the current below the protection point, so as to protect devices, prevent the overcurrent fault caused by sudden load or interference and reduce the loss caused by.stop without reason.
Over voltage suppression

The overvoltage suppression function could prevent inverter from overvoltage fault in ACC/DEC process. During ACC/DEC, if the bus voltage of inverter reaches or exceeds the overvoltage protection point, the overvoltage suppression function could suppress the rising of bus voltage by automatically adjust the operation frequency, so as to protect the devices and avoid the overvoltage fault caused by the rising of bus voltage.
Random carrier frequency

Compared with the sharp motor noise of fixed carrier frequency, the output voltage harmonic spectrum of random carrier frequency is uniform in a wider frequency range, which makes the motor noise much softer.
Turn off the spectrum analysis of random carrier frequency

Turn on the spectrum analysis of random carrier frequency

Excellent energy-saving functions

Adopt the new generation of energy-saving control technology to realize the high-efficiency operation of induction motor; reduce the excitation current according to the load current, and automatically adjust according to the loading condition; improve the motor efficiency at most; reduce the motor consumption and energy consumption. 30% of AM&PMSM adopt the VC mode to drive PMSM and the energy utilization could increased by more than 10%.

Support software upgrade on-line

AC300 can upgrade software on-line through VEICHI firmware upgrade software.
AC300 built-in software can be upgraded and replaced directly through the traditional RS485 serial port.

Powerful upper machine software

There is user-friendly upper machine software for AC300, which is convenient to operate and configure. Besides the keyboard, users can also use VCACSoft Ver1.3 to set, copy and monitor parameters. It could timely and conveniently provide the VFD state information for users, so as to provide unprecedented flexibility for debugging, setting, monitoring and troubleshooting.
The software could operate in Windows environment, and perform date exchange by common RS485 interface or field bus.

Motor control module

Structural hardware features

Simple internal layout, convenient wiring operation

Full range of narrow-body design and strict control in structure dimension. The main models contain most regular applications, various extension interfaces and ordered terminal layout, which is convenient for wiring.

- Keyboard, integration of indicators and five-bit digital tubes
- SPI-A extension interface—connect with any extension card
- SPI-B extension interface—connect with any extension card
- Terminal resistance, selection sliding switch of input/output
- Wiring terminal
- Rj45 network interface, extension line uses network connection
- EMC terminal—EMC fast disconnection with earth
- Main terminal

Standard configuration of terminals

No.	Unit Circuit	Quantity	Remarks
1	Common X input	5 channel	Dual-direction input
2	Common Y output	1 channel	
3	Relay output	1 channel	Normal on/off
4	10V power output	1 channel	50mA
	24V power output	1 channel	200mA
5	Voltage/Current analog input	2 channel	V/A support random switch
6	Analog output (optional)	1 channel	0-10V output
			0-20mA output
			0-50KHz pulse output
7	Rs485 communication	1 channel	ModBus-RTU
8	Low-speed pulse input	1 channel	X5:0-5 KHz input

New book-body structure

Ac300 series all adopt book narrow-body design, and the volume is 60% smaller than the original, which is the real "book-body machine" of inverter.

AC70 platform (Previous model)

AC300 platform

Smaller about 60%
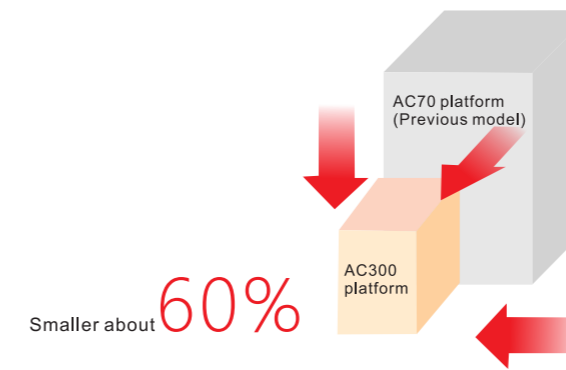

New structure design

Adopt separate deduct design of components and radiator: strengthened protection of capacitors, MOS tube and relays, closed design of inverter sides, to improve the ability to resist environment.

Wide tooth surface of heat dissipation, high air speed design, can ensure no reduction of capacitors with full power inverter in high temperature.
Optimized structure design

Book narrow-body design, rationally utilization of space, can greatly save the size and cost of main cabinet.

	RUN	Spark	Inverter is reverse rotating
	RUN	Off	Inverter stops

Fan fast disassembly design

With the innovative fan structure design, the fan can be quickly replaced and cleaned without the aid of external tools on the premise of ensuring the stability and efficiency of the fan.

Manually open the fan   The fan opened easily

Remove the fan cover for cleaning   Remove the fan for replacement

MB Series

Selection of European terminal conforming to IEC60988-2-1:UL1059: UL 486E specification. Save the connection time while ensuring the safety and reliability:wire stripping---Line number---fasten. AC300 inverter adopt MB series on small power main circuit.Using the European terminal to connect the main circuit in the cabinet to the main loop at least half the time compared to the previous machine. Greatly improve the efficiency of customer assembly.

Wire Stripping→line Number→press Wire→fasten
Wire Stripping→line Number→fasten

AC300 Model	Wire diameter ∅ (mm)	Intercepting area of wire (mm²)	Wire strip length (mm)
Main circuit terminal			
0.75kW-2.2kW	0.25-2.5	0.05-5.2	7-8
4.0KW-5KW	0.5-2.5	0.2-5.2	6-7
7.5KW-11KW	0.8-4	0.5-13	10-11
Schematic diagram of stripping			

Wide voltage design

Input voltage range is 320V-460V. Avoid the impact of voltage fluctuations and meet the harsh grid environment.
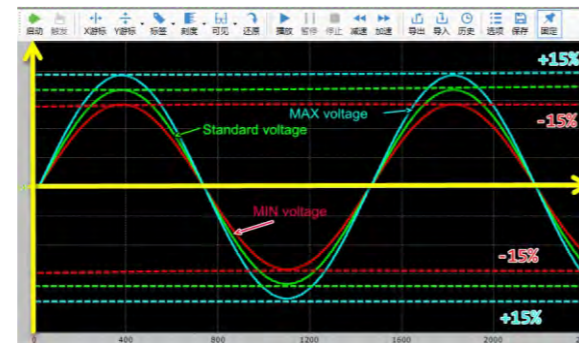

EMC discontent ground line design

Using innovative EMC disconnect ground line design, fast selection through terminal.

EMC Selective Grounding

Comprehensive hardware protection

It has such functions as output to ground protection, internal buffer relay protection, fan drive circuit protection, external 24V DC short circuit protection, motor overload protection and other hardware protection functions, so as to realize the omni directional protection from the inverter's internal and peripheral devices.

Fault type				
System abnormal	Input side loss phase	Stall protection	ACC over current	Output side loss phase
Load protection 1	ACC over voltage	Overheat	PID feedback fault	Under voltage when running
Current detection fault	Speed deviation too large	Motor overload	Motor detection fault	……

A new electric motor to ground short circuit detection

The inverter starts to detect the ground short circuit immediately. Once the motor side is found short circuit,then inverter stop the output and protect the motor.

Wiring Diagram

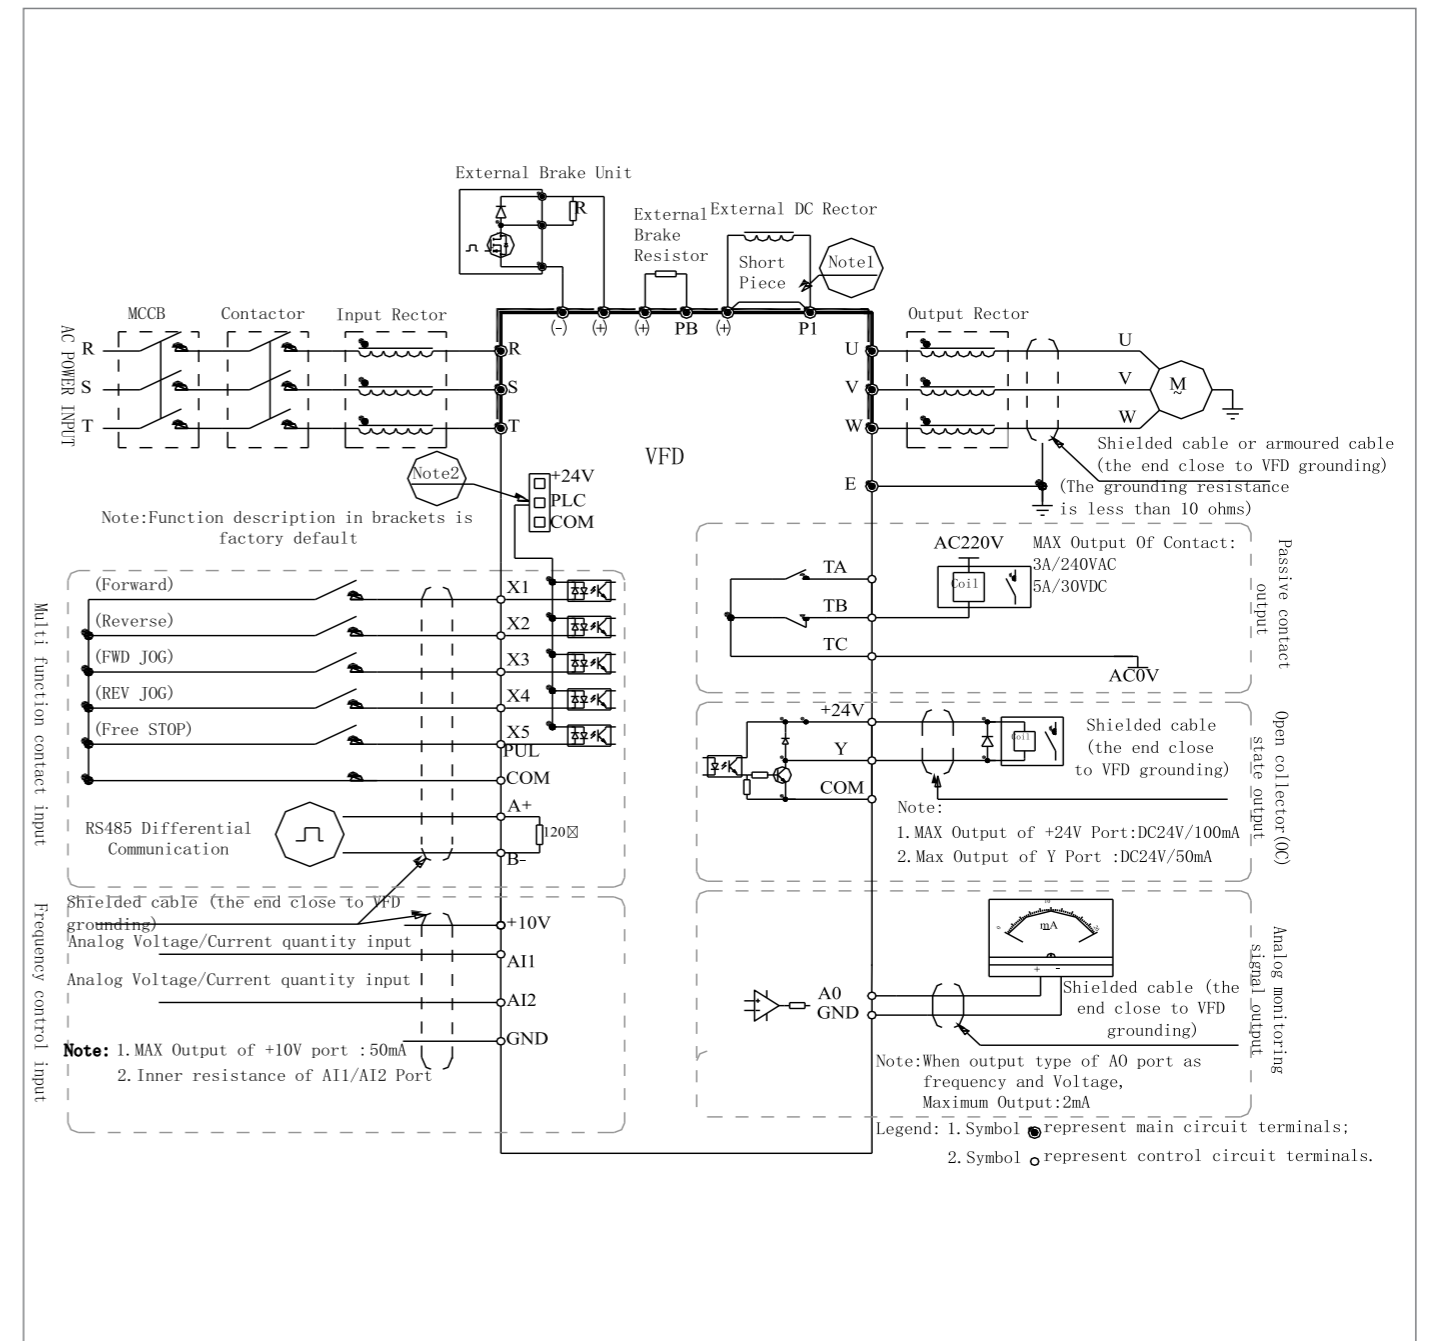

Note:

1.When installing DC reactor, make sure to dismantle the short connector between terminal P1 and(+).

2.NPN or PNP transistor signal can be selected as the input of multi-function input terminals (X1~X5/PUL). The inverter built-in power supply (+24V terminal) or external power supply (PLC terminal) can be selected as bias voltage. Factory default: "+24V" short connects with "PLC", which locates between RJ45 and terminals.

3. Analog monitor output is the special output for meters such as frequency meter, current meter and voltage meter. It can't be used for control operations such as feedback control.

4. As there are multi pulse types, please refer to the details of wiring connection modes.

AC300-PG01

5V differential signal input, Maximum frequency 500KHz, With input signal disconnection detection function.

AC300RT1

Resolver card, It can support four different transformation ratios: 0.219, 0.286, 0.5, 0.58. Factory default: 0.5.

AC300IO1

Four digital input (X10 can support 50KHz pulse input), one digital output, one analog input, one relay output. It can also support temperature detection (PT100 & KTY84).
AC300CAN1

CANopen extension card

AC300DP01
